Safronics has, for the last 30+ years, been designing, manufacturing, distributing and servicing a full range of solid state motor controls for industrial automation in several countries around the world. From fractional horse powers to several thousand horsepower they have the product to optimize every application requiring control of speed and torque of electric motors. Their success in serving their customers needs is demonstrated by their rapid growth at rates in excess of the market as a whole. This growth has been achieved by the company's continued commitment to offer world-class products supported by superior technical support.

With more than 30 years of experience in the motor control field, Safronics has the knowledge base to provide turn-key solutions at multiple levels. With regional engineering and manufacturing centers located throughout the United States, Safronics is there to support all its customer application and system requirements. Their engineering centers cover a wide range of industries from mining, textile, forest products, wire, ski systems, HVAC, and many more. Whether a business needs standard product or turn-key solutions, Safronics and all its companies will be there.

Safronics is an independent, management owned company operating from its head office in Fort Myers, FL with engineering centers located in Salt Lake City, UT; Charlotte, NC; Canby, OR; Calgary, Alberta; Los Angeles, CA; and York, PA.
