The acquisition of Globe-Union, in 1978, propelled Johnson Controls to a leadership position in the automotive battery industry. While they remain a leader in the industry they founded, Johnson Controls has also assumed a leadership position in the manufacture and development of automotive batteries and interior components for cars and light trucks. Today, Johnson Controls is the largest producer of private-label, lead-acid automotive batteries in the world.

Johnson Controls continues to gain market share as a result of their continuous efforts to improve battery quality and life, and by partnering with a select group of strong retailers and distributors. Aftermarket battery customers include AutoZone, Pep Boys, Interstate Battery, Sears, Wal-Mart and Costco.

They also make original equipment batteries for automakers including DaimlerChrysler, Ford, Honda, Nissan and Toyota. Investments in new product and process technology that bring value to their battery customers helps maintain their market leadership.
