Oregon Machine Works provides a source for hydraulic press manufacturing, precision machined parts and fabrication services. They specialize in long and short production runs, general machining, light fabrication, and custom machinery built to specification.

Industries served include food, beverage, water, pharmaceutical, chemical, industrial and plastics. They work with all metals including stainless, carbon, aluminum and plastics.

Offering both precision machining and fabrication services with quality and customer satisfaction being of the highest priority. Oregon Machine Works practices Total Quality Control (TQC) by doing in-process inspections to ensure that customers receive the best and most cost-effective service. They also offer 100% 1st article inspection on all parts, making sure they conform to customer specifications.

Oregon Machine Works offers the most advanced CNC equipment available, with operators possessing many years of experience in precision machining.
