Founded in 1875, Shimadzu Corporation has grown into a 2 billion dollar multinational company employing about 8,000 people worldwide. With over 30 worldwide locations and more than 70 international distributors, Shimadzu corporation produces diverse and unique technologies in analytical, medical, environmental, industrial, biotech, aircraft, physical testing, semiconductor, life science, and other scientific fields.

The analytical division is the world's third largest producer of high-precision analysis and measurement instrumentation. A Shimadzu employee was awarded the Nobel Prize in Chemistry in 2002, continuing the company's global reputation for cutting-edge technology and innovation.

Established in 1997 in Canby, Oregon, Shimadzu U.S.A. Manufacturing, Inc. is the North American production operation for Shimadzu Corporation. This facility incorporates research & development, product assembly, warehousing, precision machining, and sheet metal fabrication. It is the most vertically integrated Shimadzu factory in the world and is a show case of world class manufacturing techniques.

Shimadzu U.S.A. Manufacturing, Inc. manufactures scientific analytical instrumentation, precision machined and fabricated parts, OEM products, and provides research and development services to the U.S. market. The Canby facility has 50 employees, and a stellar reputation for quality products, on-time-delivery, and competitive costs.
