Matt O. Wilson started Wilson Construction in 1952 in Troutdale, Oregon. Knowing that good equipment and hard workers were essential, Matt worked hard to find and hold onto the best. Wilson's current President, Don Wilson, Matt's son, began working for the company in 1974.

Wilson Construction specializes in the construction of overhead and underground electrical distribution and transmission power lines. With a combined force of over 400 people working in the Western United States, Wilson Construction is the largest privately held utility construction company in the Western United States. Customers range from small utilities to large power providers like Bonneville Power Administration.

Wilson's main headquarters are located in Canby, Oregon and employs thirty people with satellite offices in Spokane, Sacramento, San Diego, Kennewick, and Denver. The company's experienced key personnel, ability to adapt to many industry changes, and their on-going flexibility have been essential contributors to their successful safety, quality, and cost philosophies, set by Matt in the beginning and carried on by Don today. Each of these dynamic forces has influenced Wilson's steady growth and success over the last 50 years.
